SEPTEMBER 2020

The fastest bear-market recovery in history showed little sign of wavering In August. Investor optimism remained buoyant on signs of progress in developing a vaccine to quell the pandemic, which helped to instill confidence in a swift global economic revival. Meanwhile, the sheer abundance of policy support and the conciliatory tone on US-China trade also emboldened risk appetite during the month. Importantly, the Federal Reserve's prominent policy shift rippled across financial markets after Chair Powell unveiled an average inflation targeting regime that will allow for a more relaxed approach towards inflation and consequently, an extended period of monetary accommodation – providing yet another tailwind for the global economy and stock markets alike.

Gold (USD/oz)	1970.50	0.39%	29.37%	29.38%

Global equity markets thrived for a fifth straight month, with the MSCI All Country World rising 6% in August. American bourses lead the charge, with the tireless rally in the heavy-hitting technology space fuelling the stretch of record-breaking gains for both the S&P 500 and the Nasdaq. The S&P/TSX also gained, albeit more modestly. Looking abroad, European stocks posted their best monthly gain since April on speculation that governments can avoid new lockdowns, while emerging market equities trimmed their 2020 losses after the US and China reiterated their commitment to the phase-one trade deal.

Fixed income markets posted negative results in August. The Federal Reserve embarked on a significant shift in its monetary policy framework and announced that it will target an inflation rate that averages 2% over time, implying greater tolerance for an overshoot. The biggest move was in the longer-end of the curve, with the 10 year treasury yield jumping 18 basis points to 0.70% as the more relaxed stance on inflation and employment stoked inflation expectations. Indeed, the 10-year breakeven inflation expectations rate shot higher and closed at 1.80%, just shy of January's prepandemic high. With the Fed ultimately reinforcing that rates will remain anchored at the short-end for an extended time, the yield curve steepened, with the closely-followed spread between the two- and ten-year yields expanding by 15 basis points to 0.57%, the widest in over two months.

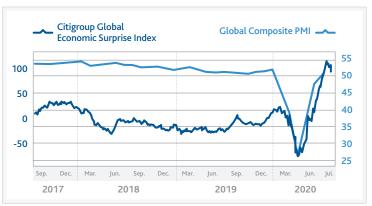

The wave of softer dollar conditions prevailed as declining real rates eroded the US yield advantage, while the upbeat mood in the marketplace curbed demand for the world's reserve currency. The loonie touched its highest level versus the US dollar since January, while the euro rose to a two-year high thanks to the European Union's coordinated response on a joint recovery fund that has boosted the common currency's credibility.

Unrelenting weakness in the dollar bolstered the commodity spectrum through August. Oil rose more than 5%, which marked its fourth straight monthly gain. Copper advanced on mounting signs that the market is tightening, with improved global demand dynamics, China's liquidity injection, and shrinking inventories sending the red metal to a fresh two-year high. Finally, gold was whipsawed. While lingering risk appetite weighed on the haven metal, gold managed to eke out a modest gain after the Fed pledged to keep interest rates lower for years to come. Indeed, higher inflation tolerance and an extended period of low rates will keep real yields pinned lower, increasing the appeal of non-interest bearing gold.

The US recovery is broadening out, with factory activity, housing, and consumer demand all improving steadily through the summer. Personal spending is on pace for a robust rebound in the third quarter, with rising compensation and an elevated savings rate acting as a crucial source of support for the consumer as fiscal support fades. Meanwhile, manufacturing expanded in August at the fastest pace in almost two years, with the ISM gauge of factory activity jumping to the highest since late-2018.

The global healing process continued through August, with economic gains reported broadly across the world. Citigroup's Global Economic Surprise Index soared to a record high during the month and exceeded the previous peak reached in 2009, signaling that incoming economic data has largely surpassed expectations. Meanwhile, the global Purchasing Managers Index has stabilized in expansion terrain for a second month in August, with widespread gains across both the factory and services sectors.

China was the first to succumb to the coronavirus and is proving to be the fastest to make a comeback. Activity data for July revealed that the factory sector has powered the recovery, even as sluggish retail activity undercut the rebound. Industrial output rose 4.8% y/y and factory profits surged 19.6% y/y, while retail sales slipped 1.1% y/y. Encouragingly, several indicators pointed towards further momentum in August, including improved business confidence and more robust sales of homes and autos.

USA

The US economy continues to power forward in the aftermath of the pandemic-induced recession. The consumer remains a pivotal source of strength, while factory and housing activity have also added to the narrative for a rapid recovery. Personal spending has made an impressive comeback as government support measures and pent-up demand reignited spending activity. At the same time, a rebound in hiring has fuelled income gains and will help to cushion the blow from fading fiscal support following the expiry of emergency benefits at the end of July. Looking forward, the third quarter is shaping up to be a historic one, though the outlook for the fourth quarter will hinge on a positive development on the vaccine-front as well as some sort of new fiscal support package, where a compromise is probable given that politicians are unlikely to allow an economic relapse ahead of the November elections.

INTERNATIONAL

The global outlook has brightened markedly since the nadir in April as reopening progress, pent-up demand, and the plethora of monetary and fiscal support revitalized economic activity. According to the purchasing manager indices (PMI), the global expansion lingered-on for a second month in August after emerging from contraction terrain in July. US business activity expanded at an impressive pace, with the composite PMI jumping to the strongest level since early 2019. Meanwhile, the Eurozone composite PMI fell modestly, though the balance remains consistent with ongoing expansion. In contrast, Japan has been slower to regain traction as the economy's reliance on trade has made its recovery increasingly precarious. Indeed, Japanese export data revealed a mixed backdrop, with exports to China accelerating even as shipments to developed economies remained weak as fresh outbreaks in the US and Europe dampened demand in July.

EMERGING

The Chinese economy is leading the global growth revival. Authorities have proven successful at mitigating the proliferation of the coronavirus which has eased disruptions on business, while central bank and government support measures have also been instrumental in guiding the world's second largest economy back to health. The activity data for July revealed an uneven backdrop, with rebounding factory output at odds with sluggish consumer trends. However, the closely-monitored PMI survey data for August signaled that the economy gained further ground throughout the summer, with the Composite gauge of services and manufacturing activity strengthening to its highest level since May 2018. Looking forward, the economic recovery in China appears to be well-entrenched. Domestic demand remains on the path to improvement here in the second half, while the progressive reopening of overseas economies should reignite external demand for Chinese goods.

MAIN SCENARIO RAPID RECOVERY

PROBABILITY 45%

A therapeutic is discovered in the near-term and proves sufficient in gaining control over the proliferation of the virus. As the outbreak recedes, sentiment improves drastically and isolationism and social distancing measures abate in accordance. In response, factories and services are able to reopen for business in a smooth fashion, while government efforts to bridge the income gap stemming from the economic stop prove successful in alleviating the damage to both businesses and consumers. As a result, economic activity snaps back dramatically at a rapid pace during the third quarter as confidence is restored and pent-up demand is unleashed, while the lagged impact of massive monetary and fiscal stimulus amplifies the rebound through the second half of 2020 and into 2021. As an extended period of robust, above-trend growth ensues, newly announced stimulus measures are unlikely (and unnecessary) in this optimistic scenario.

SCENARIO 2 SUBDUED RECOVERY

PROBABILITY 30%

Stringent mitigation efforts prove successful in stemming the spread of the pandemic and flattening the global infection curve, which brings about a certain degree of confidence that we are regaining control over the propagation of the disease and its potential growth impacts. At the same time, confidence prevails that a viable medical solution to treat the coronavirus will be made available in the coming year. As a result, economic activity resumes during the third quarter of 2020 as major economies progressively restart their engines, albeit at a slower, more subdued pace. Factories and other workplaces take time to return to full capacity and not every job lost during the crisis is won back. As the virus has not yet been completely eliminated, social distancing behaviours are only partially loosened and lingering health fears prompts some reluctance from consumers and businesses to re-engage fully, which ultimately restrains the magnitude of the economic recovery in the coming year. As the economy will take longer to return to pre-COVID levels under this subdued recovery scenario, monetary and fiscal stimulus is almost certain to remain extremely accommodative and policymakers will refrain from reining in their supportive measures over the 12-18 month time horizon.

SCENARIO 3 ECONOMIC STAGNATION

PROBABILITY 25%

In this downside scenario, no clear medical solution is discovered and social distancing guidance remains. While strict mitigation efforts ultimately prove successful in containing the contagion and spurs some resumption in economic activity during the summer, the fact that the outbreak hasn't been fully conquered and the risk of a second wave of infections leaves the economy in a vulnerable position, with local quarantine efforts necessary for affected areas. Reopening plans are delayed and even reversed, the population goes back into partial lockdown-mode, and the steep contraction in the second quarter makes way for a stagnant growth environment through 2021 as heightened levels of fear and anxiety leave consumers and businesses hesitant to spend until a vaccine is made available. These factors become self-fulfilling in that the loss of business revenues and potential for corporate bankruptcies results in job losses that further dampen spending intensions and economic activity in the coming 12-18 months. The good news, however, is that the monetary and fiscal impulse will remain firmly in place under this dire economic scenario - which inevitably helps to alleviate the economic damage and reduces the likelihood of this calamitous outcome.

PERFORMANCE

Past performance is no guarantee of future results. All investments involve risk including loss of principal. It should not be assumed that the portfolio holdings or investments made in the future will be profitable or will equal the performance of those discussed herein. The investment environment and market conditions may be markedly different in the future and investment returns will fluctuate in value. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will be profitable or suitable for a particular investor.

INDEX DEFINITIONS

S&P 500

The S&P 500 Index (SPX) is a stock market index made up of approximately 500 US large cap stocks. The index comprises a collection of stocks of 500 leading companies and captures 80% coverage of available.

The S&P/TSX composite index is the Canadian equivalent to the S&P 500 market index in the United States. The S&P/TSX Composite Index contains stocks of the largest companies on the Toronto Stock Exchange (TSX). The index is calculated by Standard and Poor's, and contains both common stock and income trust units.

The Morgan Stanley Capital International ("MSCI") EAFE Index is a stock market index made up of approximately 909 constituents. It is often used as a common benchmark for international stock funds. The index comprises the MSCI country indexes capturing large and mid-cap equities across developed markets in Europe, Australasia and the Far East, excluding the U.S. and Canada.

The Morgan Stanley Capital International ("MSCI") EM Index is a stock market index that consists of the following 23 emerging market country indexes: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates.

US Personal Spending MoM US Personal Spending is measured by the Consumer Price Index (CPI) is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food and medical care. It is calculated by taking price changes for each item in the predetermined basket of goods and averaging them. Changes in the CPI are used to assess price changes associated with the cost of living; the CPI is one of the most frequently used statistics for identifying periods of inflation or deflation.

ISM Manufacturing Index

The ISM Manufacturing Index is based on surveys of more than 300 manufacturing firms by the Institute for Supply Management (ISM). The ISM Manufacturing Index monitors employment, production, inventories, new orders and supplier deliveries. A composite diffusion index monitors conditions in national manufacturing and is based on the data from these surveys.

Citigroup Global Economic Surprise Index

Citigroup Economic Surprise - Global Index measures weighted historical standard deviations of data surprises (actual releases vs Bloomberg survey median). The indices are calculated daily in a rolling three-month window. The weights of economic indicators are derived from relative high-frequency spot FX impacts of 1 standard deviation data surprises. The indices also employ a time decay function to replicate the limited memory of markets. Global Composite PMI

JP Morgan Global Composite PMI gives an overview of the global manufacturing and services sectors. It is based on non-opinion based monthly surveys of over 16,00 purchasing executives from 32 of the world's top economies, including the U.S., Japan, Germany, France and China which together account for over 85 percent of global GDP. It reflects changes in global output, employment, new business, backlogs and prices. The Global Composite PMI is seasonally adjusted at the national level to control for varying seasonal patterns in each country and is produced by J.P. Morgan and Markit in association with ISM and the International Federation of Purchasing and supply Management (IFPSM).

China Industrial Production

China Industrial Production (YoY) The industrial production index measures the change in output in Chinese manufacturing, mining, construction, and electricity, gas and water. It includes enterprises with annual sales greater than 5 million yuan, accounting for 70% of total value-added in the Chinese economy. China Industrial Profits (YoY)

Chinese corporate profits, which refer to total profits of all state-owned industrial enterprises and non-state-owned industrial enterprises with the annual sales revenue above 5 million yuan.

China Retail Sales

China Retail Sales (YoY) tracks the resale of new and used goods to the general public, for personal or household consumption. This concept is based on the value of goods sold. China Industrial Production measures the change in output in Chinese manufacturing, mining, construction, and electricity, gas and water. It includes enterprises with annual sales greater than 5 million-yuan, accounting for 70% of total value-added in the Chinese economy. Output refers to the physical quantity of goods produced, unlike sales value, which combines quantity and price. The index covers the production of goods and power for domestic sales in China and for export. It excludes production in the agriculture, transportation, communications, trade, finance, and service industries, government, and imports
